

HYDRAFACIAL® TREATMENT PROTOCOLS

hydracial

SAFETY RULES

1. All specialists who work with the HydraFacial® must be instructed. Do not use the device without prior instruction.
2. Always use clean disposable HydroPeel® tips for each procedure. The use of a disposable tip on more than one client/procedure may result in infection.
3. Never use the serum twice. Using the serum on more than one client/procedure may cause harm to the patient and will void all manufacturer's warranties.
4. Do not use serum after the expiration date which is indicated on the bottle.
5. In case of an allergic reaction, stop using the serum immediately.
6. Always consult the client before the procedure and acquaint the client with the list of contraindications.
7. Always perform a skin sensitivity test on the neck, behind the earlobe, to check the intensity of the vacuum level.
8. Make sure that the liquid enters the treated area only through the HydraFacial® handpiece.
9. Do not use HydraFacial® on sensitive areas such as the eyelids. During the procedure, the eyelids must be closed and protected with protective goggles or damp cotton pads. Always keep a sterile eyewash solution at hand.
10. Recommend your clients to remove their contact lenses before the procedure.
11. Empty the waste container after each procedure according to the protocol.
12. Recommend the patient to use SPF 30 or 50 sunscreen regularly after the procedure (not less than SPF 30).
13. Do not use the device in a steamy humid environment and do not spill water on the electrical components of the device.

GENERAL RECOMMENDATIONS FOR HYDRAFACIAL® TREATMENT PROTOCOLS

1. All treatment protocols are created for the face, neck, and décolleté.
2. All treatment protocols are only general recommendations and may vary depending on the client's individual needs.
3. Always start the procedure traditionally. Follow the recommended treatment protocols and contraindications for different skin types. Set treatment modes individually for each patient. Please note that the patient's skin conditions and skin sensitivity are different. Note that the recommended settings in the treatment protocols are medium range. If necessary, you can set more aggressive vacuum settings.

NOTE: the settings suggested in the protocols reflect the pressure when the tip is in firm contact with the skin.

4. Consumption of serum for one procedure may vary depending on the experience of the skin specialist. Usually, those who are just starting to work with this technology have a higher consumption of serums.
5. All acid peels must be washed off with water after exposure for 5 minutes or after the extraction.
6. The diamond peel is performed in 1-2 passes.
7. For the clients with hyperkeratosis we recommend using orange or purple tips instead of the blue tip.

SIGNATURE HYDRAFACIAL® | DEEP CLEANSING AND REJUVENATION
